Soft-closing slide

The IA88 soft-closing slide from **King Slide** allows end-users to open drawers with a slight push and close them without slamming. Hydraulic dampers provide a longer life span and smooth, quiet operation. The IA88 slide uses a patent-pending, all-mechanical design with no need for electronics.

Wood bond

Designed to bond treated wood, Advantage EP-940 from **Franklin** is an emulsion polymer isocyanate system suitable for ponderosa pine, bamboo, imported woods, wood-plastic composite, and laminated veneer lumber. It is designed to meet ASTM D-5751-99 standards for wet use in laminate joints in non-structural lumber on some types of wood. Advantage EP-940 has no added formaldehyde and may qualify projects for LEED points. It is designed to produce less foam and a stable spread so users can work faster and create a better bond. Franklin says it conditions faster than PVA-based adhesives and offers enhanced water, heat and sol-

vent resistance. This two-component adhesive is designed for a longer pot life than other EPI adhesives. It combines with Hardener 400, a polymeric isocyanate, at 12 to 15 parts Hardener to 100 parts emulsion.

MDF doors

WalzCraft has added five-piece, MDF, cabinet doors and drawer fronts to its line of custom cabinet components. They are available with flat or raised center-panel profiles, and the MDF construction is less susceptible expansion and contraction than solid wood.

Spacer inserter

Shops of any size can quickly and easily place spacers for the center panels of cabinet doors with the Go Green inserter, according to the manufacturer, **Unique**. The inserter is designed to be environmentally friendly, use no electricity or air, and to operate without annoying cords or hoses. Unique says it is light, mobile and easy to fill with the optional Unique Auto-Loading Hopper.
